First, we want to know our own locale , how to display the locale in a JSTL?

```
<c:out value="$ {pageContext.request.locale.language}"/>
```

I'm confused with the jstl tag libs:

I want to format a number to a currency with german style

```
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<%@taglib uri="http://java.sun.com/jsp/jstl/core" prefix="c" %>
<%@taglib uri="http://java.sun.com/jsp/jstl/fmt" prefix="fmt" %>

<html>
<head>
    <title>format number</title>
</head>
<body>
    <c:set var="val" value="40.52" />
    <p> Currency in USA
    <fmt:setLocale value="en_US" scope="session"/>

    <fmt:formatNumber value="$ {val}" type="currency" />
    </p>
    <p>Currency in Germany
    <fmt:setLocale value="de_DE" scope="session"/>

    <fmt:formatNumber value="$ {val}" type="currency"/>
    </p>
</body>
</html>
```

And thats the output:

Currency in USA \$40. 52

Currency in Germany 40, 52 €

I am using fmt:formatNumber to format currency in JSTL, it will display negative currency in (\$100) format, if you want to make it display negative currency in negative format instead of (\$100).

I would suggest:

```
<fmt:formatNumber type="currency" pattern="$#, ##0. 00;-$#, ##0. 00" value="-10000" />
```

You can remove '\$' from the pattern, if you like.

order example :

```
<c:set var="val" value="46563746375"/>
<fmt:formatNumber value="${val}" pattern="###.###E0"/>
```

If you run the above code you will see the number is formatted as the pattern which is 46.5637E9.
